

Names: all three are settled

Field	Value
Team name	Vagabonds
Project name	Aavaran
GitHub org	AavaranAI
Repository	AavaranAI/Aavaran

Everything below is the reasoning that led there, kept so nobody has to reopen it.

The original discussion

Three separate things need names, and they do not have to match.

What	Where it appears	Any constraint?
Team name	SIH portal, deck slide 1, the report	None. Anything you like.
Project name	The repo, the extension, the demo	None. It sits inside your org, so it only has to be unique to you.
GitHub org	The URL in the report's appendix	Must be free on GitHub. Usually the team name.

Only the third has a real constraint, and it is the only reason "taken" appears below. A project called Chhaya can happily live at `github.com/<your team>/chhaya` even though `github.com/chhaya` belongs to someone else.

Project names

The project is a browser add-on that covers up private details before anything is sent to an AI. Good names point at *hiding in order to help*, not just at privacy.

Name	Meaning	Why it fits	Watch out for
Antardrishti	"inner vision" (Sanskrit); also ordinary Hindi for <i>insight</i>	The perception happens inside your machine and stays there. This is the architecture, stated in one word. Reads as a real word, not a pun.	Twelve letters; people will shorten it
Mukhauta	"mask" (Hindi)	The page puts on a mask before the AI sees it. Concrete, visual, easy to explain to anyone	Sounds playful, maybe too light for ISRO
Chhaya	"shadow, reflection" (Sanskrit/Hindi)	The server only ever sees a shadow of the real page. Short, soft, memorable	Fairly common word; less distinctive

Name	Meaning	Why it fits	Watch out for
Aavaran	"covering, veil" (Sanskrit)	Also idiomatically a <i>screen</i> or <i>sheath</i> , which is a genuine double meaning here	Less widely understood than the others
One-Way Glass	plain English	The agent sees out, nobody sees in. Anyone understands it instantly, no translation	Generic; no Indian character
Redact First	plain English	States the single design rule the whole project rests on	Sounds like a feature, not a product

My pick: Antardrishti. It is the only one where the name *is* the technical claim. "Inner vision" describes precisely where the seeing happens and why nothing escapes, and because it also means "insight" in normal speech it does not sound like a forced acronym. It will land with an ISRO jury.

Runner-up: Mukhauta, if you want something friendlier and easier to say. The mask image makes the whole idea explainable in one sentence to a non-technical person, which is worth a lot in a five-minute pitch.

Team names

The project name is settled: **Aavaran**. The team name is a separate field on the portal and it should not repeat it.

What winning teams are actually called

Names taken from the published SIH results rather than from guesswork. SIH 2025 software edition: *Eklavya, Gap Bridgers, Hack Hounds, Team Pioneers, Teen Titans*. SIH 2025 hardware: *Caffeinated Coders*. SIH 2024 at the IIT Gandhinagar centre: *Saarathi, One Boat Solution, Coding Gurus, Team Anurved, CodeZ, AANYA, Typewriters II, INSIGHTS, Bhasha Setu, Leviosa*. From 2018: *Linguistic Pandas, Update 1.0*.

They fall into four groups:

Register	Examples from the winners	Worth copying?
A Sanskrit or Hindi word naming a role	Eklavya, Saarthi, Anurved, Bhasha Setu	Yes. Carries meaning, sounds deliberate, and reads well to a government panel
B Coder humour	Caffeinated Coders, Hack Hounds, Coding Gurus, Linguistic Pandas	No. Extremely common, says nothing about you
C The function as a name	Gap Bridgers, One Boat Solution, INSIGHTS	Only if it describes the team, not the software
D Pop culture	Teen Titans, Leviosa	No. Fine for a college fest, thin for ISRO

Be honest about what this proves: nothing. Winners come from all four groups, so the name is not what decides it. What a name can do is cost you nothing and fit, and group A is where the cheapest fit is.

Suggestions

Since Aavaran means *veil*, the team name should not be a second word for hiding. The better contrast is a name about **evidence**, because the strongest thing in the report is that every number can be reproduced and that the weak ones are stated rather than buried.

Name	Meaning	Why it fits the six of you
Pramaan	"proof, valid means of knowledge" (Sanskrit)	In Indian philosophy <i>pramana</i> is literally the study of what counts as evidence. A team whose report's best section is <i>What we have not proved</i> could not ask for a better word. Reads as Team Pramaan presents Aavaran
Anveshan	"quest, enquiry, research"	Enquiry rather than achievement. Modest in the right way, and it survives past this hackathon
Saakshya	"evidence, testimony"	Same idea as Pramaan, softer sound, slightly less known
Nirikshak	"the observer, the one who inspects"	Points at visual perception, which is the half of the problem statement people forget
Aarambh	"beginning"	You are the first BS-DSBM batch at IIM Mumbai. True, and nobody else can claim it
Setu	"bridge"	In the register of <i>Bhasha Setu</i> , a 2024 winner. Short, easy to say, easy to remember

What was picked: Vagabonds. The reasoning below is left as written rather than rewritten after the fact.

Pick at the time: Pramaan. It is the only one that says something specific and true about how this project was built, it is in the register that shows up most among winners, and it does not collide with Aavaran. Say it once at the start of the pitch and it frames everything after.

Runner-up: Anveshan, if Pramaan sounds like it is claiming too much.

Avoid: anything with *code*, *hack*, *byte* or *tech* in it, a pun on your college name, and any name that is a second word for privacy. The first is crowded, the second travels badly outside Mumbai, and the third wastes the contrast you get for free.

What is free on GitHub right now

Checked 17 September 2026. Only matters for the org.

Free: antardrishti, mukhauta, screenmask, oneway-glass, redactfirst, sih26171, antardrishti-labs

Taken: chhaya, aavaran, anveshan, paridhi, kshitij, sankalp, aarambh, silhouette, blindfold, pratibimb

If you want a taken name as your *team* name, that is completely fine. Use it on the portal and pick something else for the org, or add a suffix like anveshan-*iimm*.

Where each name goes, now that Aavaran is settled

Field	Value	Status
Project name	Aavaran	Decided. On the report cover, in the extension, the panel and the demo
GitHub org	AavaranAI	Done
Repository	AavaranAI/Aavaran	Done
Team name	Vagabonds	Decided. On the report cover and footer, the email, and deck slide 1

The team name has no constraint at all. It does not need to be free on GitHub, it does not need to match the project, and it can be a word somebody else has already used.

Once you decide

Tell me the org name and the repo name and it is one command:

```
./scripts/retarget-repo.sh <org> <repo-name>
```

That updates the git remote, rewrites the URL in the report, rebuilds the PDF, and verifies the new address actually resolves before it prints anything. Two things still need a person, and both are in `ORG-MIGRATION.md`: creating the organisation, which GitHub only allows through the website, and transferring the repository, which only Vansh can start because he owns it.
